

PRE-ANESTHETIC BLOOD WORK

Your pet will be undergoing general anesthesia today. In order to recognize any hidden problems your pet may have, we recommend having a pre-anesthetic blood profile run. This consists of a CBC, which will check blood cells, and a chemistry profile which will check blood glucose, kidney and liver enzymes.

These blood tests will help us assess the health status of your pet more completely and determine if there are any additional precautions we need to take before anesthesia.

For our geriatric patients (pets over 7 years of age) we highly recommend a geriatric work-up which includes the blood profile, urinalysis, an EKG, and a chest X-ray.

There is an additional charge for these tests. We hope you understand the need for these important tests.

CBC and Chemistry Profile - \$50.88
Geriatric Work-up - \$270.63

I DO _____ DO NOT _____ wish to have the pre-anesthetic blood profile run.
I DO _____ DO NOT _____ wish to have the geriatric work-up.
